

Graduate Student Opening

Prof. Lee's group in the Department of Mechanical and Aerospace Engineering at Rutgers University has an opening for a PhD student with interests in mechanics of soft materials, 3D printing, and micro-/nano-engineering.

Our group is mainly interested in 3D micro-fabrication and soft active materials. Interesting physics/mechanics of soft materials is being studied for a broad range of applications in emerging fields such as soft robotics, tunable metamaterials, and biomedical engineering. For more information, please visit <http://hleelab.rutgers.edu>

Students with strong background in **experimental mechanics** or/and **LabVIEW programming skill** are encouraged to apply. Interested individuals should directly contact Prof. Lee (howon.lee@rutgers.edu).
